

EXECUTIVE READOUT

Turn strategic interest into a capital engine.

ALI has three assets worth organizing around today: an active Circle pathway, a stronger Signals proof package, and a market that is rapidly moving toward agentic finance and governed AI intelligence. The risk is not lack of opportunity. The risk is letting one promising conversation substitute for a repeatable pipeline.

TODAY: lock the next Circle move

THIS WEEK: build parallel funder lanes

THIS MONTH: package ASIP + Signals as proof

NUMBER ONE TASK TODAY

Create and send the Circle next-step package.

Produce a one-page Circle memo, a five-question clarification note, and a proposed next-meeting agenda. The goal is to convert a positive conversation into a specific next step while creating reusable collateral for other institutional and grant conversations.

OWNER: ANTHONY + MARKETING SUPPORT · DUE TODAY

01 · WHERE WE ARE TODAY

ALI is becoming legible as infrastructure, not just research.

Circle / ASIP lane

ASIP is already architecturally aligned with Circle: USDC payment rail, Paymaster as the first proof artifact, and later lanes around wallets, CCTP, Gateway, Nanopayments, Arc, and reserve infrastructure.

Signals lane

Signals now has a clearer product proof stack: live ChemSignals page, white paper, Google Slides source deck, and a pilot narrative around governed enterprise intelligence in under 30 seconds.

Capital lane

The funding story should move from opportunistic pursuit to an operating cadence: qualified conversations every week, segmented by institutional partners, grants, AI safety funders, and strategic pilots.

02 · MARKET LANDSCAPE

The market is validating ALI's strategic territory.

\$77B

USDC in circulation at Circle's Q1 2026 quarter end.

\$21.5T

Q1 2026 USDC onchain transaction volume reported by Circle.

\$222M

ARC presale raise, with BlackRock, Apollo, a16z crypto, and others participating.

<30s

ChemSignals synthesis latency claimed for VP-level market briefs.

Circle: stablecoin scale

Circle: transaction velocity

Arc: capital signal

Signals: decision latency

The strategic opening: Circle is building rails for agentic economic activity; ALI can frame ASIP and Signals as the trust, verification, and governance layer those rails will need as AI agents begin moving value and producing institutional decisions.

03 · WHAT IS ON THE HORIZON

Three time windows should drive the team's attention.

Next 24 hours

Clarify Circle's next step, package the one-page memo, and decide which ALI proof points are ready to attach now: Paymaster path, ASIP roadmap, Signals, and governance thesis.

Next 7 days

Build the first capital pipeline: ten institutional/strategic targets, ten grant/foundation targets, and a short outbound sequence tailored to each lane.

Next 30 days

Convert the product proof into external momentum: one Signals pilot path, one ASIP technical proof artifact, and one repeatable institutional raise narrative.

04 · TODAY'S FOCUS MAP

Everyone should know the same immediate play.

ANTHONY

Confirm the next Circle audience, ask, and decision path. Capture what Circle reacted to, what they requested, and who needs to be convinced next.

CRITICAL

MARKETING

Turn the Circle memo into a reusable institutional narrative: problem, proof, why ALI, why now, what next. Keep the language infrastructure-first and protocol-aligned.

TODAY

PRODUCT

Prepare the proof inventory: ASIP Paymaster status, Signals proof metrics, ChemSignals materials, and the specific source links that support each claim.

TODAY

CAPITAL

Start the broader funding list so Circle is not the only live lane. Include grants, AI safety funders, institutional crypto infrastructure, and strategic pilots.

START

05 · STRATEGIC RECOMMENDATION

Lead with a simple thesis: safe agentic finance needs an independent alignment layer.

External message

AI agents are becoming economic actors. They will need wallets, spending policies, service discovery, micropayments, and real-time settlement. But the institutional market will also need safety, verification, governance, and auditable intelligence. ALI should occupy that trust layer.

Internal discipline

Do not let the team over-rotate around one conversation. Circle is an important lane, but the operating system should be a weekly capital engine with multiple qualified targets, reusable collateral, and disciplined follow-up.

06 · SOURCE-BACKED CONTEXT

Context anchors for credibility.

Circle Q1 2026 results

USDC scale, transaction volume, revenue, and ARC presale data.

Circle Agent Stack announcement

Agent wallets, Nanopayments, CLI, marketplace, and programmatic USDC transactions.

Circle Agent Stack product page

Positioning around AI-native financial applications and agents holding/transacting with value.

Arc public site

Stablecoin-native L1, direct Circle-stack integration, testnet activity, and agentic economic use cases.

Circle nanopayments analysis

Arc, Gateway, and stablecoin settlement logic for high-frequency sub-cent agent payments.

AI Safety.com funding tracker

Open AI safety funding lanes including rapid grants, LTFF, and other rolling opportunities.

Coefficient Giving

Leadership incubator and transition funding for work on AI security and catastrophic risk reduction.

Foresight AI safety grants

Quarterly AI safety-oriented grant lane, typically in the \$10K-\$100K range.

Internal ALI source anchors used: Anthony Circle Alignment Plan, ChemSignals live page extraction, Signals white paper, Signals Google Slides ingestion summary, and prior ALI Circle financing research brief. This brief intentionally omits private conversation text and uses only strategic conclusions safe for team distribution.
