

Eight Layer Digital Agent Architecture

SOVEREIGN

Portable, inspectable, open-ended, and controlled by the operator instead of locked inside one vendor.

AGENTIC

Able to perceive context, remember state, plan work, call tools, and improve through feedback.

OPTIMIZED

Tailored to the person, team, workflow, environment, and value path instead of generic automation.

● Purpose	Mission, values, alignment, governance, and success criteria.
● Intelligence	World model, memory, reasoning, evaluation, planning, and learning.
● Voice	Prompts, language, protocols, reports, outputs, and human interface.
● Orchestration	Routing, delegation, handoffs, feedback loops, and human-agent collaboration.
● Functions	Callable tools, APIs, browser, files, apps, commands, and effectors.
● Runtime	Operating system, shell, packages, processes, permissions, and execution environment.
● Compute	Processors, accelerators, inference, model calls, cycles, and energy converted into work.
○ Hardware	Physical machine, storage, network hardware, power, and physical environment.
